

Significant Mid-Week Winter Storm

January 8, 2024
5:10 AM

Multiple Potential Hazards Across Whole Region

OVERVIEW:

- High confidence in passage of a multi-faceted storm Tuesday night into Wednesday with widespread impacts across New England.
- Winter Storm, High Wind, Flood, and Storm Watches have been issued.

TIMING

- Late Tuesday afternoon into Wednesday

HAZARDS & IMPACTS

- **Flood Watch:** Heavy rain combined with snowmelt, frozen ground, and snow-clogged drains will cause overland/urban flooding. Minor to moderate river flooding may occur, especially south of the mountains.
- **Winter Storm Watch:** Moderate to heavy snowfall is possible from the foothills northward into the mountains. This will be a heavy/wet snow that will cling to trees and powerlines. Snowfall amounts and the timing of the transition to rain are still uncertain.
- **High Wind Watch:** Strong to locally damaging winds of 40-65 mph are possible, highest along the coastal plain and northwest slopes of the White Mountains. This will likely result in power outages, especially when combined with heavy snowfall accumulations.
- Minor to moderate coastal flooding is possible during the Wednesday morning high tide. Significant beach erosion and overwash is also likely.
